

CMS UnifyApps UI/UX & Responsive Audit

Complete functional, responsive, workflow, and UX evaluation across desktop, tablet, and mobile viewports.

APPLICATION UNDER TEST

cms-unifyapps-dev.modhs.med.sa

AUDIT DATE

October 06, 2026

TESTED VIEWPORTS

1440×900, 1024×768, 768×1024, 390×844

PORTAL ORGANIZATION

Ministry of Defense Health Services (MODHS)

AUDIT SPECIALIZATION

Senior Product Designer & Responsive QA

DESIGN CONSTRAINT

Fixed Brand Identity (Colors/Emblem Untouched)

Overall UX Quality Rating

Needs Targeted UX Improvements — Viable desktop foundation, critical mobile breakdowns.

5.2

out of 10.0

1. Executive Summary & Overview

The **CMS UnifyApps** portal serves as the enterprise content publishing platform for the Ministry of Defense Health Services (MODHS). While the widescreen desktop interface establishes an authoritative, clean layout, **the application exhibits severe responsive and workflow breakdowns on tablet and mobile viewports.**

20

TOTAL UX FINDINGS

2

P0 CRITICAL BLOCKERS

8

P1 HIGH SEVERITY

10

QUICK WINS IDENTIFIED

Core Vulnerabilities Identified

- ✓ **Handheld Grid Breakdowns:** The Media Center card grid forces 4 columns into 390px, reducing asset cards to ~80px unreadable strips. Dashboard KPI metric cards refuse to wrap, causing text strings and SVG icons to physically collide.
- ✓ **Unnecessary Desktop Scrollbars:** Data tables across all modules trigger horizontal scrollbars on 1440×900 displays, pushing timestamps and action buttons offscreen.
- ✓ **Unlabelled Naked Icons on Mobile:** Tablet and mobile transitions replace the desktop sidebar with a bottom navigation bar containing 6 naked icons with zero text labels.
- ✓ **Form Occlusion:** Slide-out drawers have fixed footer action bars that float directly over the lowest form inputs.
- ✓ **Missing Arabic RTL:** All Arabic input fields lack `dir="rtl"` attributes, causing inverted punctuation and cursor jumps.

2. Cross-Device Responsive Matrix

Module / Screen	Desktop (1440PX)	Laptop (1024PX)	Tablet (768PX)	Mobile (390PX)	Observed Defect
Dashboard	⚠ Improve	✖ Broken	✖ Broken	✖ Broken	KPI cards collide at 390px; search cut off at 1024px.
Content Management	⚠ Improve	⚠ Improve	⚠ Improve	✖ Broken	Filters degrade to duplicate "Filter" buttons; actions take >50% width.
Add New Page Drawer	⚠ Improve	⚠ Improve	⚠ Improve	✖ Broken	Fixed action bar covers lowest form fields; generic "Save Changes" label.
Publishing (News)	⚠ Improve	⚠ Improve	⚠ Improve	✖ Broken	Raw body text bloats table columns; non-standard 11-row limit.
Media Center	✓ Good	⚠ Improve	✖ Broken	✖ Broken	4-column grid never wraps on tablet/mobile; cards squeezed to 80px.
Workflow (Requests)	⚠ Improve	⚠ Improve	⚠ Improve	⚠ Improve	Gratuitous scrollbar on 6-column table; header grammatical errors.
FAQs & Locations	⚠ Improve	⚠ Improve	⚠ Improve	✖ Broken	Sticky action column overlays "Owner Scope" header (clipped to "O").
Notifications Panel	⚠ Improve	⚠ Improve	⚠ Improve	⚠ Improve	Badge displays "2" while 4 unread items exist; typo ("Unreads").

Screen 01: Dashboard Overview (/dashboard)

Desktop: 7/10 | Tablet: 3/10 | Mobile: 1/10 | Overall UX: 4/10

Overview of portal published content statistics and recent activity approval logs.

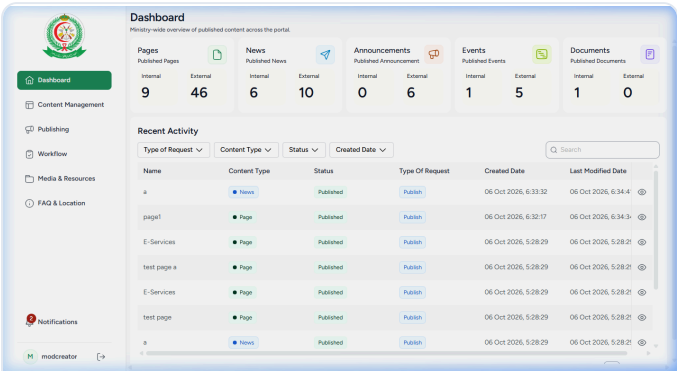

Figure 1.1: Desktop (1440×900) — Overview layout with Recent Activity table.

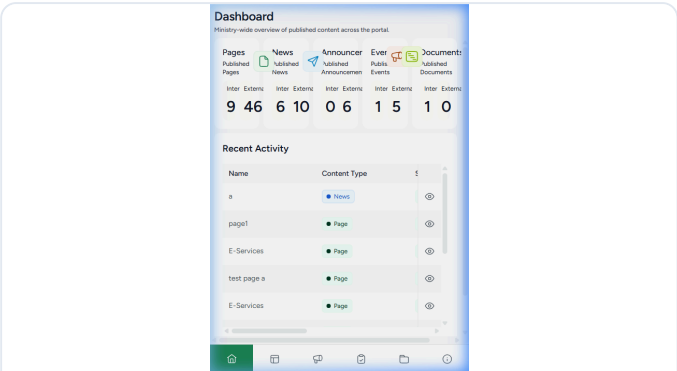

Figure 1.2: Mobile (390×844) — Severe KPI card collision & mashed text strings.

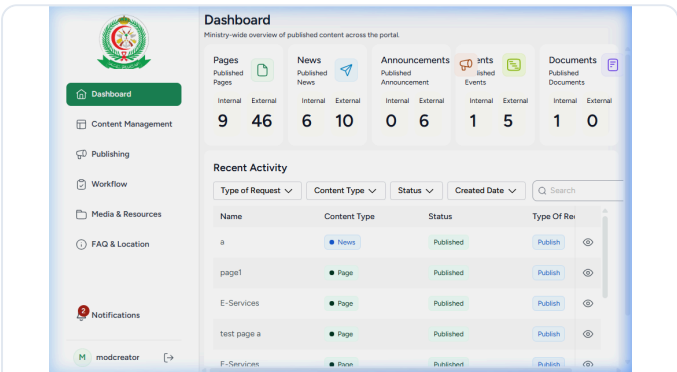

Figure 1.3: Laptop (1024×768) — KPI cards bleed off edge; search box cut in half.

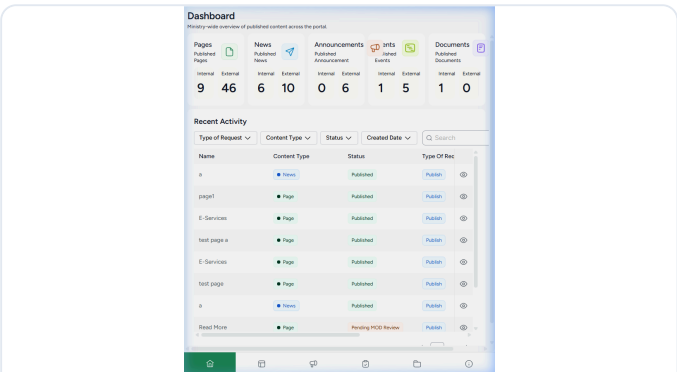

Figure 1.4: Tablet (768×1024) — Bottom navigation bar with unlabelled naked icons.

● **KPI Metric Cards Squeeze & Collide on Handheld Devices**

PO CRITICAL

Problem: On mobile (390×844), all 5 metric cards remain locked in a single row, reducing card width to ~65px. Text strings mash into "Inter Externa" and SVG icons physically collide with neighboring cards.

Fix: Implement responsive CSS Grid: `grid-template-columns: repeat(auto-fit, minmax(200px, 1fr))`. Stack cards into 2 columns on mobile.

● **Search & Filter Bar Clipped at 1024px and Disappears on Mobile**

P1 HIGH

Problem: On 1024×768 displays, the filter row exceeds available container width, clipping the "Search" input in half. On mobile (390×844), filters are completely absent.

Fix: Wrap filter controls onto a new line and allow the search bar to occupy full container width.

Management interface for portal pages, bilingual structures, and slide-out page creation drawer.

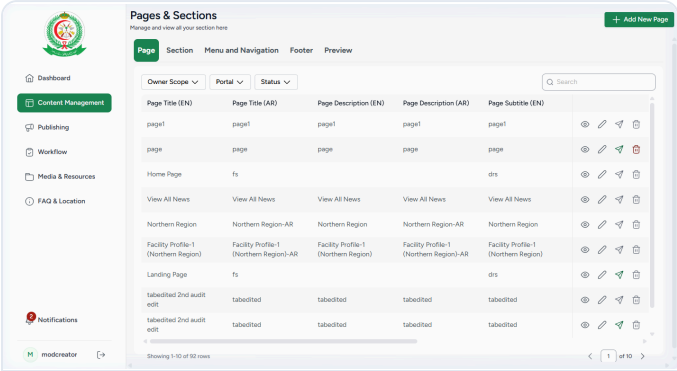

Figure 2.1: Desktop (1440×900) — Pages list with bilingual titles and action icons.

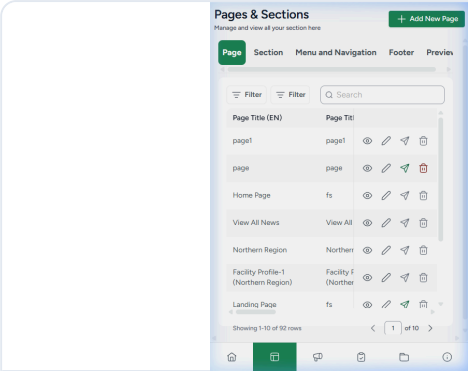

Figure 2.2: Mobile (390×844) — Filters degrade to duplicate "Filter" buttons.

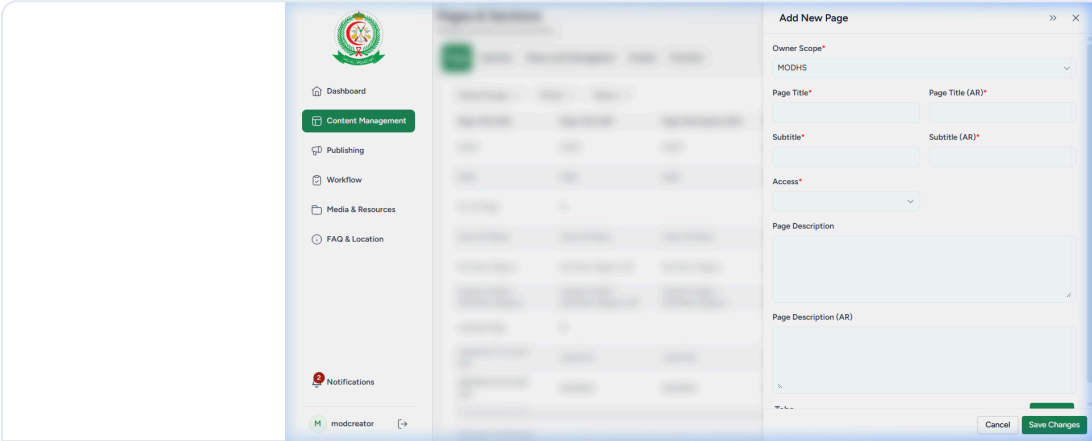

Figure 2.3: Add New Page Drawer — Fixed footer buttons overlap lowest input field ("T... L...").

- Sticky Footer Buttons Cover Lowest Form Inputs

P1 HIGH

Problem: The fixed bottom action bar containing "Cancel" and "Save Changes" overlaps the lowest input field. "T... L..." is visibly clipped behind the footer bar due to missing bottom scroll padding.

Fix: Add padding-bottom: calc(var(--footer-height) + 24px) to the scrollable form body.
- Mobile Filters Lose Context (Duplicate "Filter" Labels)

P1 HIGH

Problem: On mobile (390×844), filters collapse into two identical buttons both labeled "Filter", while the 3rd filter disappears completely.

Fix: Provide a unified "Filters (3)" bottom sheet trigger, or maintain compact chips with abbreviated labels.
- Missing RTL Direction on Arabic Fields & Misleading Button Label

P2 MEDIUM

Problem: Arabic input fields lack dir="rtl", leading to inverted punctuation. Furthermore, the creation drawer button is labeled "Save Changes" rather than "Create Page".

Fix: Add dir="rtl" to Arabic fields; dynamically label button "Create Page" when adding new entities.

Editorial workspace for news/articles and digital asset management for media resources.

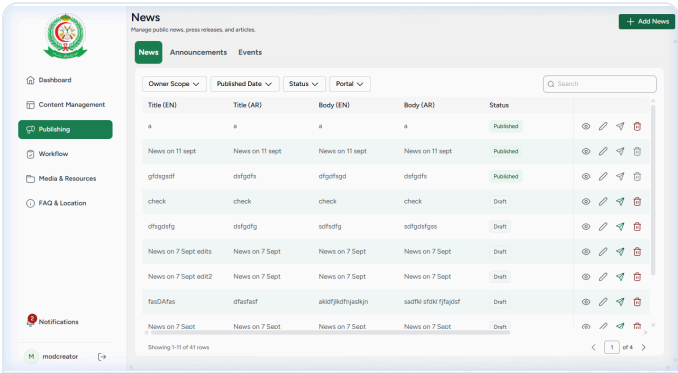

Figure 3.1: News Desktop (1440×900) — Full body text in table causes horizontal stretch.

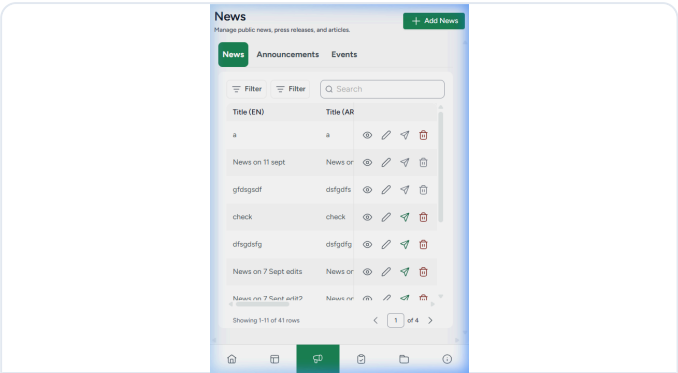

Figure 3.2: News Mobile (390×844) — Truncated view with duplicate filter buttons.

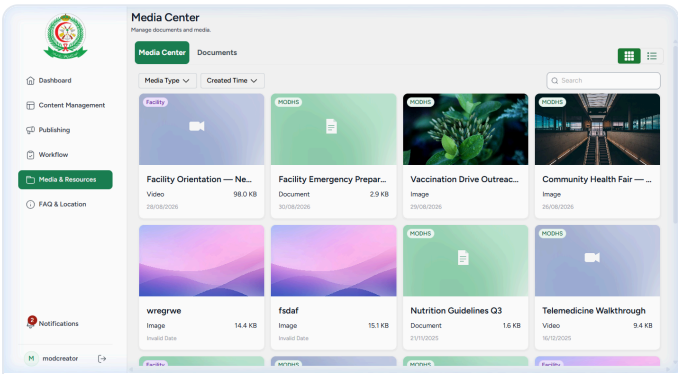

Figure 3.3: Media Desktop (1440×900) — Structured 4-column card grid.

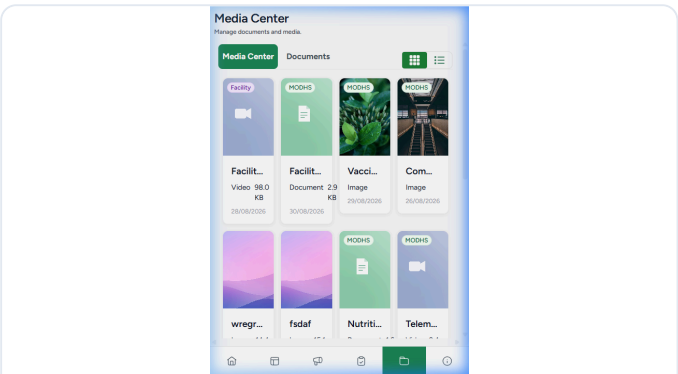

Figure 3.4: Media Mobile (390×844) — Severe collapse (cards forced to 80px).

Media Grid Remains Locked to 4 Columns on Mobile Viewports

PO CRITICAL

Problem: The 4-column grid does not reflow on mobile. Cards are squeezed down to ~80px wide, truncating titles to 5 letters ("Facilit...", "Vacci...") and clipping off the right edge.

Fix: Apply responsive grid: 1 column on mobile, 2 on tablet, and 3-4 on desktop displays.

Raw Body Text in Table Causes Extreme Horizontal Stretch

P1 HIGH

Problem: Displaying "Body (EN)" and "Body (AR)" directly in table cells forces massive column expansion, pushing status and dates out of view.

Fix: Remove Body columns from list table. Display only Title, Author, Date, and Status.

Unhandled JavaScript Date Parsing Error ("Invalid Date")

P1 HIGH

Problem: Several media cards display the literal string "Invalid Date" directly to users.

Fix: Add safe timestamp parsing with fallback placeholder ("—" or "Date unavailable").

Help repository, approval pipeline, and real-time reviewer notification center.

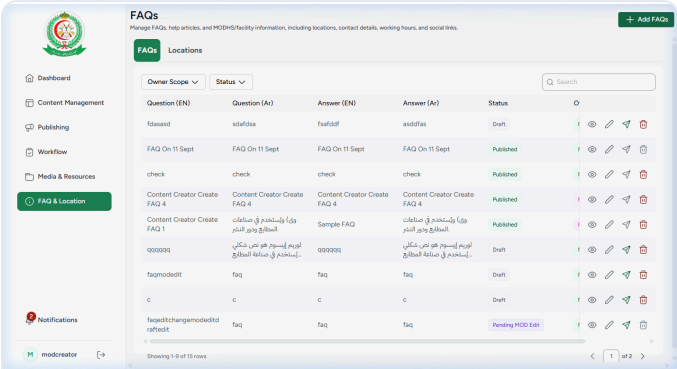

Figure 4.1: FAQs Desktop — Action buttons overlap "Owner Scope" column header ("O").

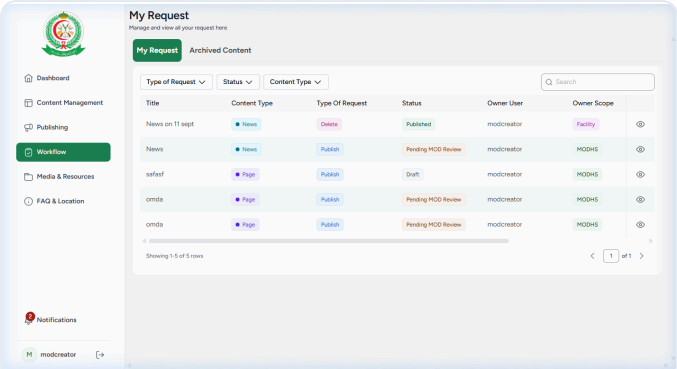

Figure 4.2: Workflow Desktop — Gratuitous scrollbar on low-column table.

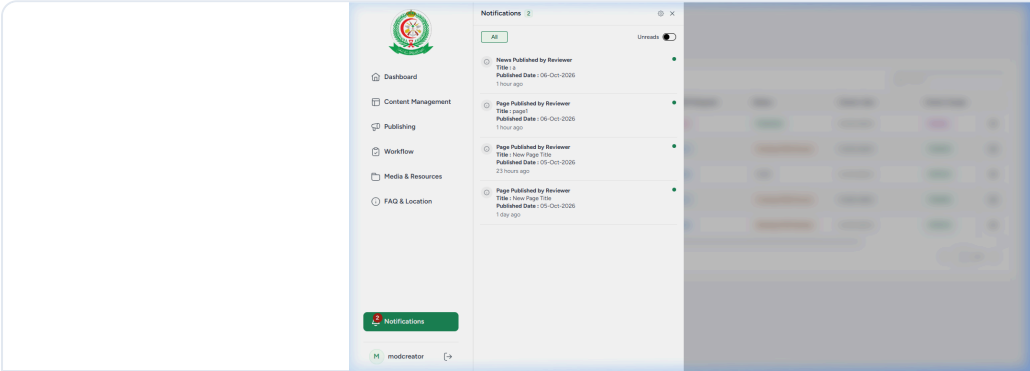

Figure 4.3: Notifications Panel — Unread badge mismatch (badge says 2, list displays 4).

Floating Action Column Clips "Owner Scope" Table Header

P1 HIGH

Problem:

The floating action icons column sits directly over the "Owner Scope" column, slicing the header text down to the single letter "O".

Fix: Fix sticky column margin offsets to prevent overlapping adjacent table cells.

Notification Badge Count Mismatch

P2 MEDIUM

Problem:

The sidebar badge indicates "2", but the panel contains 4 distinct items with active unread dots.

Fix: Synchronize the unread notification state with the sidebar badge component.

4. Top 20 UX Problems (Prioritized by Impact)

#	PROBLEM & IMPACT	AFFECTED SCREEN	VIEWPORT	SEV	RECOMMENDED SOLUTION	EFFORT
1	Media grid locked to 4 columns Breaks Media Center on mobile; cards squeezed to 80px.	Media Center	390×844	P0	CSS Grid auto-fill with 1 column mobile breakpoint.	Low
2	KPI cards collide & overlap Executive metrics become illegible mashed text on mobile.	Dashboard	390px, 768px	P0	Reflow to multi-row grid (2 columns on mobile).	Low
3	Drawer footer covers form inputs Users cannot view or edit lowest inputs ("Top Level / Target Link").	Add New Page	All	P1	Add padding-bottom: 80px to scrollable container.	Low
4	Mobile filters lose labels Filters collapse into duplicate "Filter" buttons with zero context.	Pages, News	390×844	P1	Retain contextual labels or consolidate into single filter drawer.	Medium
5	Naked icons on bottom nav Zero text labels on tablet/mobile bottom bar induces high cognitive friction.	Global Nav	≤ 1024px	P1	Add micro-text labels under icons or use mobile slide-out menu.	Medium
6	Search bar clipped at 1024px Laptop users cannot search recent activity.	Dashboard	1024×768	P1	Allow search bar to wrap onto its own line.	Low
7	Raw body text in tables Bloats table columns and forces severe horizontal scrolling.	News, Articles	All	P1	Remove body columns; display Title, Date, Status, Author.	Low
8	Action icons overlay table header "Owner Scope" column header clipped to "O".	FAQs	1440×900	P1	Fix sticky column offset and cell padding calculation.	Low
9	Missing profile/logout on mobile Handheld users have no way to view profile or sign out.	Global Nav	≤ 768px	P1	Add user avatar and menu in mobile header.	Medium
10	"Invalid Date" displayed on cards JavaScript parsing failure exposed to end users.	Media Center	All	P1	Add timestamp validator and fallback string ("—").	Low
11	Table actions occupy >50% mobile width Truncates essential titles and hides statuses.	All Tables	390×844	P1	Collapse 4 inline action icons into 3-dot overflow menu (:).	Medium
12	Persistent scrollbars at 1440px Widescreen desktop monitors forced to scroll horizontally.	All Tables	1440×900	P2	Adopt fluid column sizing and responsive container widths.	Medium
13	Missing Arabic RTL direction Cursor jumps and inverted punctuation in Arabic fields.	All Drawers	All	P2	Explicitly add dir="rtl" to all Arabic input fields.	Low

#	PROBLEM & IMPACT	AFFECTED SCREEN	VIEWPORT	SEV	RECOMMENDED SOLUTION	EFFORT
14	"Save Changes" label on creation flow Confuses users creating brand-new entities.	All Drawers	All	P2	Dynamically label button "Create [Entity]" vs "Save Changes".	Low
15	Notification badge mismatch Badge shows 2, drawer shows 4 unread items.	Notifications	All	P2	Synchronize badge count state with unread query.	Low
16	Sub-44px touch targets on table icons High risk of tapping Delete when targeting Edit.	All Tables	Mobile/Tablet	P2	Enlarge touch targets to 44×44px; add delete confirmation.	Medium
17	Inconsistent pagination row counts Page limits vary arbitrarily between 9, 10, 11 rows.	All Modules	All	P2	Standardize to 10 rows per page with page size selector.	Low
18	Header typos and grammar errors "Manage all your section", "My Request".	Headers	All	P3	Correct copy across header subtitles.	Low
19	No unsaved changes confirmation Accidental backdrop click loses all entered form data.	All Drawers	All	P3	Add confirmation alert on dirty drawer dismissal.	Medium
20	Missing empty states & skeletons Layout jumping during asynchronous data loading.	Media, Tables	All	P3	Add standardized skeleton loaders and empty state cards.	Medium

5. Quick Wins & "Keep — What Works"

Top 10 High-Impact Quick Wins (No Rebranding Required)

- ✓ **Add `dir="rtl"` to all Arabic Inputs:** Immediate resolution for bilingual editorial typing issues. (Effort: 10 mins).
- ✓ **Add Bottom Padding to Form Drawers:** Adding `padding-bottom: 80px` prevents sticky action buttons from obscuring inputs. (Effort: 5 mins).
- ✓ **Dynamically Update Button Labels:** Set button to "Create Page" / "Create News" on create flows. (Effort: 15 mins).
- ✓ **Sanitize Date Parsing ("Invalid Date"):** Format timestamps with safe fallback handler ("—"). (Effort: 10 mins).
- ✓ **Make Media Grid Responsive:** Change fixed 4 columns to CSS Grid `repeat(auto-fill, minmax(240px, 1fr))`. (Effort: 20 mins).
- ✓ **Enable Flex-Wrap on KPI Metric Cards:** Allow dashboard cards to wrap into 2 rows on handheld screens. (Effort: 15 mins).
- ✓ **Remove Body Columns from News Table:** Instantly eliminates horizontal scrolling on desktop news tables. (Effort: 10 mins).
- ✓ **Synchronize Notification Badge Counter:** Bind sidebar badge directly to actual unread count state. (Effort: 20 mins).
- ✓ **Standardize Table Page Size:** Set uniform 10 rows per page across all data tables. (Effort: 15 mins).
- ✓ **Fix Subtitle Grammar:** Correct "all your section" to "all your sections". (Effort: 5 mins).

Keep — What Already Works (Core Strengths)

- ✓ **Authoritative Ministry Aesthetic:** Deep forest green brand accents paired with clean white surfaces, subtle card borders, and warm neutral grays creates a dignified, appropriate government enterprise feel.
- ✓ **Clear Desktop Sidebar Navigation:** Full logo branding, well-grouped core navigation items, and clear active state indicators provide strong orientation on widescreen displays.
- ✓ **Status Badge Palette:** Intuitive color coding for lifecycle states ("Published" in soft green, "Pending MOD Review" in warm peach, "Draft" in neutral gray).
- ✓ **Bilingual Dual-Language Model:** The platform properly acknowledges the bilingual mandate of the Ministry with dedicated English and Arabic content channels.
- ✓ **Drawer Pattern for Entity Creation:** Slide-out side drawers preserve background context much better than disruptive full-page redirects.

6. Product Scorecard & Phased Implementation Roadmap

UX Dimension	Score	Evaluation Summary
Information Architecture	7 / 10	Logical module structure; clear separation between Content, Publishing, Workflow, and Media.
Navigation	5 / 10	Strong on desktop; severely degrades on tablet/mobile into unlabelled naked icons.
UI Consistency	6 / 10	Good visual harmony, but inconsistent pagination row counts (9, 10, 11) and filter collapses.
Forms & Data Entry	5 / 10	Clean slide-out drawers, but sticky footers obscure bottom inputs and Arabic fields lack RTL.
Tables & Data UI	5 / 10	Unnecessary horizontal scrolling at 1440px desktop; raw body text bloating table columns.
Interaction Design	6 / 10	Responsive feedback is functional, but lacks deletion safety gates and dirty form warnings.
Responsive Design	3 / 10	Critical failure point. Media grid locked to 4 cols; KPI cards collide at 390px.
Accessibility (a11y)	5 / 10	Sub-44px touch targets on table actions; unlabelled bottom navigation icons.
OVERALL UX SCORE	5.2 / 10	Needs Targeted UX Improvements

Strategic Phased Implementation Plan

Phase 1: Critical Responsive & Form Fixes (Sprint 1) Fix Media Center 4-column lock; enable responsive wrapping on Dashboard KPI cards; add padding-bottom: 80px to drawers; add dir="rtl" to Arabic fields; sanitize "Invalid Date" errors.
Phase 2: Mobile Navigation & Table Actions (Sprint 2) Add micro-text labels under bottom navigation icons; surface user profile, logout, and notifications in mobile header; collapse table action icons into a 3-dot overflow menu (:) on mobile.
Phase 3: Table Optimization & Enterprise Data UI (Sprint 3) Remove raw body columns from news tables; fix sticky action header overlap; standardize table page size to 10 rows per page; optimize fluid column widths to eliminate 1440px desktop scrollbars.
Phase 4: Workflow & Form Polish (Sprint 4) Dynamically label drawer buttons ("Create Page" vs "Save Changes"); implement deletion confirmation dialogs; synchronize notification badge counter; add unsaved changes warning on dirty form close.
Phase 5: Accessibility & Micro-Copy (Sprint 5) Enlarge touch targets to 44x44px; add explicit aria-label attributes to all icon-only buttons; fix typos in header subtitles; conduct full keyboard tab navigation audit.
